

three-phase
30-1250kVA

Standard features

| | |
|--------------------------------------|---|
| Voltage stabilisation | Independent phase control |
| PC selectable output voltage* | from 210 to 255V (L-N) from 360 to 440V (L-L) |
| Frequency | 50/60Hz $\pm 5\%$ |
| Admitted load variation | Up to 100% |
| Admitted load imbalance | 100% |
| Cooling | Natural air ventilation. Up to 35°C aided with fans |
| Ambient temperature | -25/+45°C |
| Storage temperature | -25/+60°C |
| Max relative humidity | 95% |
| Admitted overload | 200% 2 min. |
| Harmonic distortion | None introduced |
| Colour | RAL 7035 |
| Protection degree | IP21 |
| Instrumentation | Input & output digital multimeter |
| Installation | Indoor |
| Overvoltage protection | – Class II output surge arrester – Optimal voltage return through supercapacitors – in case of blackout |

* The output voltage can be adjusted by choosing **one** of the indicated values.
Such choice sets the new nominal value as a reference for all the stabiliser parameters.

Accessories

| |
|---|
| Interrupting devices |
| Load protection against over/undervoltage |
| Manual by-pass line |
| Total protection kit |
| Input isolating transformer |
| Integrated automatic power factor correction system |
| SPD surge arrester |
| EMI/RFI filters |
| Neutral point reactor |
| IP54 protection degree for indoor and outdoor installation |

Orion Plus three-phase 30-1250kVA

Rating in relation to the input variation percentage

| ±15% | ±20% | ±25% | ±30% | +15%/-35% | +15%/-45% |

| 1000 | 800 | 630 | 500 | 630 | 500 |
| 1250 | 1000 | 800 | 630 | 800 | 630 |

Orion Plus stabilisers are available for different ranges of input voltage fluctuation. In the ±15%/ ±20% and ±25%/ ±30% types, the change of input range is obtained through different internal connections.

The Orion Plus voltage stabilisers regulate the output voltage **independently on each phase**.

Similarly to the Orion stabilisers, they can supply **any single-phase, bi-phase and three-phase load** even in case of and up to **100% unbalanced load current** and asymmetrical mains distribution.

In this configuration, the presence of **the neutral wire is required**. The stabiliser can also operate without neutral wire by adding a device able to generate it (D/zn or D /yn isolating transformer or neutral point reactor).

The stabilisers are cooled via **natural air ventilation**, assisted by extracting fans when the cabinet internal temperature exceeds 35°C).

The instrumentation consists of **two multi-task digital line analysers** which are able to provide with information regarding the status of the lines upstream and downstream the voltage stabiliser (phase and linked voltages, current, power factor, active power, apparent power, reactive power, etc.)

The operating status of the stabiliser can be **monitored** by means of the **LEDs** on the front panel displaying all the **information** regarding each phase operating mode ('power on'; reaching of voltage regulation limits; increase/decrease of voltage regulation) and the possible **alarms** (minimum and maximum voltage, maximum current: overtemperature; ventilation failure). The alarm indicators are accompanied by an acoustic alarm.

– Up to 250kVA ±15%, the regulation circuit is protected against overload and short circuit on the voltage regulator by an **automatic circuit breaker**.

– From 300kVA ±15%, an **electronic voltage regulator protection system** activates in case of overload on the voltage regulator. In such condition, the load supply is not interrupted, but the stabiliser output voltage is automatically set to the lower between the mains voltage and the pre-set output voltage.

The service continuity is guaranteed, although the voltage is not stabilised. When the overload condition ceases to exist, the stabiliser switches automatically back to regular functioning.

The auxiliary circuits are protected by **fuses**.

The control logic, performed on the **true RMS** value, is based on **DSP microprocessors**.

The unit parameters and the output voltage reference can be **set** by using a **personal computer**, thus allowing for dealing directly in the field with any problems related to voltage stability.

All Orion Plus stabilisers are provided with **Class II SPD surge arrestors**.

Orion Plus

three-phase
30-1250kVA

Wide range

- symmetrical: **±15%, ±20%, ±25%, ±30%** (other on request)
 - asymmetrical: **+15%/-35%, +15%/-45%** (other on request)
- Output voltage accuracy: **±0.5%**.

Technology

Control and stabilisation, performed on the **true RMS** value, are based on a digital **microprocessor** operating with a software specifically developed.

Parameters and reference voltage can be **set** via a **PC**, thus allowing for adjusting the stabiliser to the actual site conditions.

Independent regulation on each phase.

Long life

System voltage regulator with **rollers** (without brushes, which are subject to heavy wear & tear). Depending on the rating, the voltage regulator could be **toroidal** or **columnar**.

Protection

Up to 250kVA ±15%: The voltage regulator is protected by a three-phase automatic **circuit breaker**.

The auxiliary circuit is protected by **fuses**.

Overvoltage protection: Class II output **surge arrester**.

Protection

From 300kVA ±15%: The stabiliser is provided of an **electronic** voltage regulator **protection system** activates in case of overload on the voltage regulator. In such conditions, the **load supply is not interrupted**.

The auxiliary circuit is protected by **fuses**.

Overvoltage protection: Class II output **surge arrester**.

Protection

Output voltage reset to the minimum value in case of blackout by means of **supercapacitors** banks in order to ensure the correct shutdown.

Instrumentation

Two **multi-task digital analyser** mounted on the front panel (linked and phase voltage current, frequency, power factor, active power, reactive power, apparent power etc.).

Monitoring

The stabiliser **operating mode** can be easily **monitored** by means of the **LEDs** on the front panel, which provide with **information** and **alarms**.
